

Buffalo, Feb. 11, 1864.

My dear Gray:

I thank you for your
"Contributions," and am very much
pleased with you, so far as I can
judge. Successful efforts to bring
order out of chaos: And yet —!
It must not. I am somewhat
and, perhaps, not disagreeably sur-
prised.

Think of it! I had pictured
Gray, the great Botanical Gray,
as, in his scientific investigations,
a cold, severe, exact man of
science: and now — O how —!
I find him, in these very "Contributions,"
~~sitting~~ — in this purely scientific
paper — in describing his account
of *Agrostis multiceps*, — how shall
I write it! — mentioning it as
"this most rare & charming little

alpine species!!!!" I am surprised,
delighted, charmed. I do wish
that our botanists were all more
Audubonish - I am glad to note
such an outbreak in our botanist.

But I insist that the *C. multiceps*
- charming though it be - cannot be
more charming than hundreds of
less regarded things, with which
I am familiar. For instance -
in a small package of grasses the
I sent you lately - what I want to,
but dare not call, *Ariza caespitosa* -
Whatever it may be it is a rare
beauty.

Just now I am troubled about
1000 things or less: But will soon,
I think, send you another small
packet, including some things
you wished. I know how you
allow yourself to be over-pressed -
but appeal to you, without hesitation,

believing that turning over the familiar
things I send you. Resolving my
doubts, must be light recreation
rather than labor.

Ever truly yours,

L. W. Chittenden.

Prof. Asa Gray.
